Lab 52 Fertilization And Early Development Answer

Development Step 2: Cleavage and Blastula Stage. After fertilization successfully activates the egg, the egg begins a series of rapid cell divisions called cleavage, illustrated below. "Typical" cell division occurs every 18-24 hours, but cleavage cell divisions can occur as frequently as every 10 minutes.

Animal Development I: Fertilization & Cleavage ...

Fertilization. Fertilization is the process in which gametes (an egg and sperm) fuse to form a zygote. The egg and sperm are haploid, which means they each contain one set of chromosomes; upon fertilization, they will combine their genetic material to form a zygote that is diploid, having two sets of chromosomes.
